Victory Energy Introduces New SOLAR Boiler Technology

COLLINSVILLE, Okla., January 02, 2009 — Victory Energy recently introduced the first industrial/utility SolarGen™ Series boiler. This new technology harnesses the clean, renewable and radiant energy of the sun to produce superheated steam at typical utility pressures and temperatures. “We are very excited to be leading the industry in producing real solutions to the ever increasing demand for ‘green’ technology”, says Mr. Jeff Coale, Vice President Business Development.

This new Concentrated Solar Power (CSP) technology offers an efficient, cost-competitive alternative to fossil fuel derived energy, making it the “choice” renewable source of steam generation for short-term opportunities and long-term commitments. “This is simply another step in our never ending desire to grow as a company and make a positive difference in the world we live in. In other words, full steam ahead!”, states Mr. John Viskup, President.

For immediate inquiry about the SolarGen Series and its profitable application, please contact Mr. John Viskup or Mr. Jeff Coale at 918.274.0023.

Victory Energy Operations, LLC is a leading, single-source supplier of custom-engineered industrial boiler systems and advanced technologies worldwide, servicing a wide range of markets. Victory Energy products and services include Voyager® “O”-type watertube boilers, Discovery™ “D”-type watertube boilers, Frontier™ – firetube boilers, SolarGen™ Series watertube boilers, Horizon™ – HRSG heat-recovery boilers (patent pending), mobile/rental boilers, auxiliary equipment such as economizers, deaerators and stacks.
